

What is the story about...
The story is about market values, page views, age, position, nationality, club, and Fantasy Premier League stats of 461 players of the English Premier League 2017/18. The FPL stats is the FPL points, FPL value, etc of every player who played for the 2017/18 league.

The Story...
For most football fans, May - July represents a lull period due to the lack of club football. What makes up for it, is the intense transfer speculation that surrounds all major player transfers today. Their market valuations also lead to a few raised eyebrows.

I am curious to see how good proxy popularity, age and fantasy premier league points could be for ability, and the predictive power these constraints would have in estimating a player's market value and compared it with the current market value they possess.

Who would care about this story...
The English Premier League clubs, the agents, soccer fans and all the people who play Fantasy Premier League are the targeted audiences. This audience will be able to understand the market value a player deserves for the future transfers and also to determine which club is heading towards being an ideal English club for the future seasons.
